COMPANY PROFILE

Atmax specializes in the R&D, manufacturing, sales and service of digital ink-jet printing technology and equipment. With a new breakthrough technology in the carpet printing, blanket printing and other high pile products.

Atmax R&D and technical strength has reached the international leading level, and devoted to intellectual property protection. Atmax already has obtained 20 invention patents (17 domestic invention patents, 2 in the United States, and 1 in the EU), including 14 utility patents.

Atmax focuses on innovative research of digital printing line, supported by the National Digital Printing Engineering Technology Center and Enterprise Research Institute, to enhance the company's international competitiveness, comprehensively promote the upgrading of the carpet industry structure, and achieve green and environmental- friendly production solutions.

DEVELOPMENT >>> HISTORY

TECHNICAL INNOVATION

2011 Pre-treatment technology

2012 Colorless ink technology

**PENETRATION
TO BOTTOM**

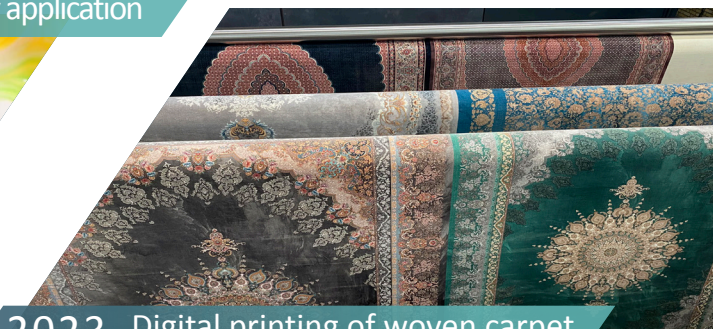

2013 Washing free technology

2017 World's first manufacturer of cationic ink

2018 Revolutionary printer Shelf up to 128pcs heads

2020 Light color ink technology application

2023 Digital printing of woven carpet

ADVANTAGES of Digital Printing

24 hour printing

Efficient and
convenient ink supply
station

High resolution
(360dpi -1800dpi)

Customized
production

Washing free (PA6,
Modified Polyester)

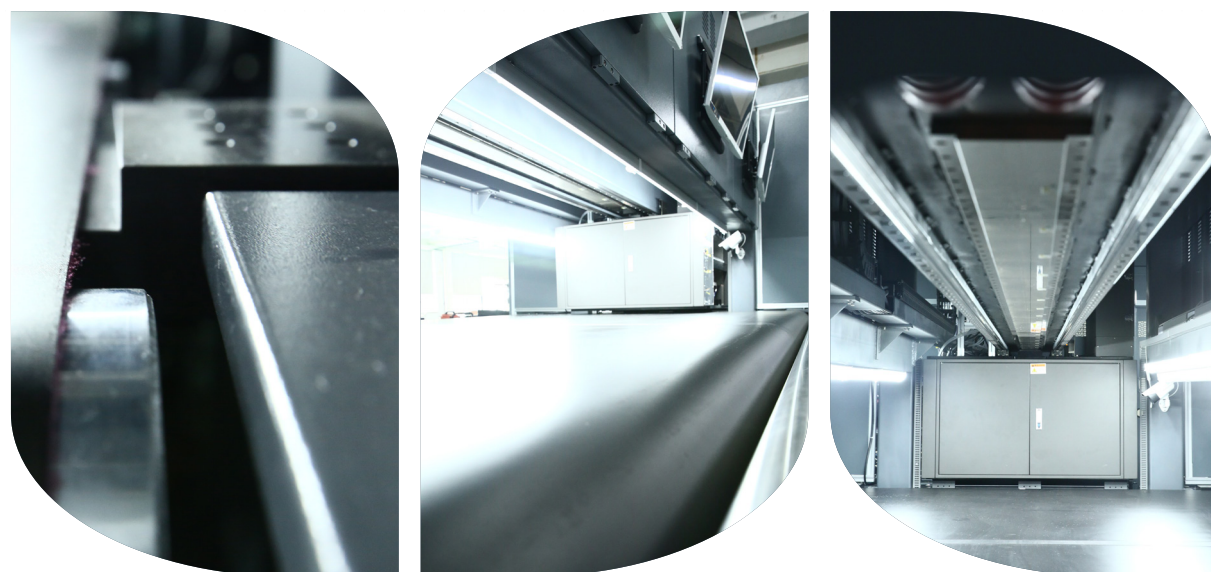

No request on min.
order quantity, One
design one piece is
workable.

Easy operation

No color limit

PRINTER HIGHLIGHTS

Independent negative pressure control for each ink channel

According to different customer's needs, the general configuration of ink channel are 4 colors, 6 colors, 7 colors, or 8 colors. The negative pressure required for each color is slightly different, and the independent negative pressure control makes the inkjet of each color more precise and does not affect each other. Improve printing efficiency, with better performance.

Negative pressure automatic follow system

Due to changes in the external environment, the negative pressure value generated by the negative pressure generator will also change, and the negative pressure follow system will automatically compensate for the negative pressure changes caused by changes in external conditions, thereby maintaining negative pressure stability. The negative pressure is closely related to printing inkjet, reducing the effect of color difference caused by negative pressure changes.

Unique and reliable guide belt lifting system

To improve the overall safety of the equipment, the printheads assembly is always in the highest position during the movement process to avoid possible rubbing with other components.

Design of hanging printheads assembly driven by linear motor

The design of non-contact drive can avoid wear and effectively reduce the load on the guide rail. Low noise and extended service life. Reducing mechanical response time and increasing motion speed can increase printing speed.

Ink constant temperature control system

Besides the heating system of the nozzle self, the secondary ink bottle has added circulating temperature control. When the external environment changes, it automatically adjusts to the set temperature to ensure that the ink maintains a constant temperature.

Overall framework structure

It can effectively and significantly reduce rack shaking caused by printheads assembly movement, ensure equipment integrity, and avoid printing defects.

Isolation design between operation area and printing area

Protecting the safety of operators.

Independent simultaneous cleaning of multiple printheads

Customers can choose the printheads that need to be cleaned according to the status of the printheads, so as to reduce the waste generated by the cleaning.

Overall moisturizing printheads

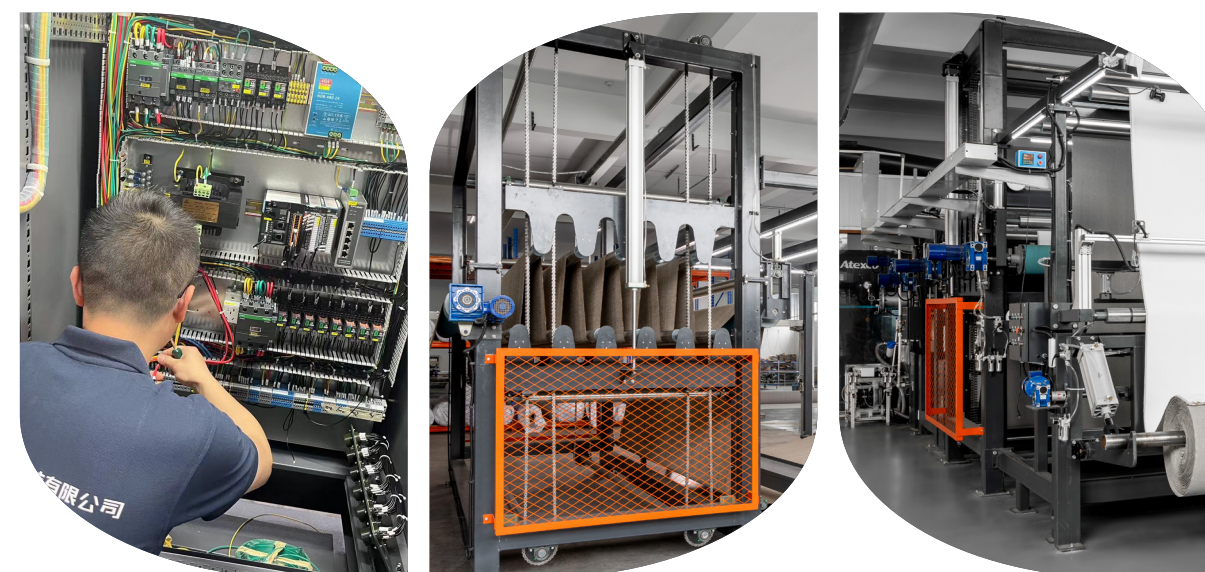

The moisturizing effect of the printheads is significantly improved, avoiding the blockage caused by drying.

Stainless steel gear pump for ink supply

Eliminate frequent replacement of peristaltic pump tube and reduce routine maintenance costs.

Floating ink collection device

Collect floating ink generated during the printing process to improve the quality of printed patterns and avoid environmental pollution.

ATMAX Inks

ATMAX ink jet printing solution

ATMAX provide total solutions of digital printing, paired with acid, dispersed, and cationic inks. Successfully landed in the markets, and created a revolutionary carpet production method and applied high-resolution digital printing technology to the production of classic polyester, modified polyester, polyamide, acrylic, wool, cotton, etc. products.

Perfectly matched with ink jet digital printing equipment

The ink perfectly matches the Spectra Starfire industrial printheads and has passed a series of very rigorous printing tests in printheads applications. Realize the perfect combination of ink and printing equipment, ensuring smooth printing without damaging the nozzle.

ATMAX acid ink -----The preferred ink for nylon and wool

Lighting fastness	level 5-6	Washing fastness	level 4	Rubbing fastness	level 4+
-------------------	-----------	------------------	---------	------------------	----------

ATMAX dispersed ink -----The preferred ink for polyester

Lighting fastness	level 5-6	Washing fastness	level 4+	Rubbing fastness	level 4+
-------------------	-----------	------------------	----------	------------------	----------

ATMAX cationic ink -----The preferred ink for acrylic

Lighting fastness	level 6-7	Washing fastness	level 4+	Rubbing fastness	level 4+
-------------------	-----------	------------------	----------	------------------	----------

The dye used in the ATMAX ink is purified and refined using advanced dye desalination technology. Not only does the ink have a bright and beautiful color, but it also passes various rigorous tests. What's more, using the ATMAX ink to print patterns with bright and realistic colors, it also has excellent printing smoothness and storage stability.

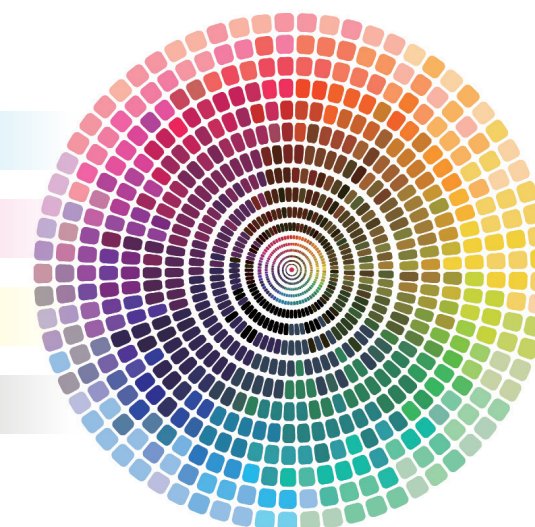

CYAN

MAGENTA

YELLOW

BLACK

ATMAX Ink Characteristics

01. Complete color spectrum, bright colors, wide color gamut, and accurate color light;
02. Excellent printing smoothness, even in industrial high-speed printing mode, without losing color gamut and smoothness;
03. Good ink storage stability;
04. After printing, the product has a soft touch, gorgeous and bright colors, and excellent color fastness;
05. Green and environmentally friendly, free from any harmful chemicals such as APEO, heavy metals, aldehydes, etc., all indicators meet the requirements of European and American chemical safety standards;
06. It can be achieved on nylon and modified polyester carpets without washing, with true "0" emissions and no pollution;

INDUSTRIAL PRINTHEADS

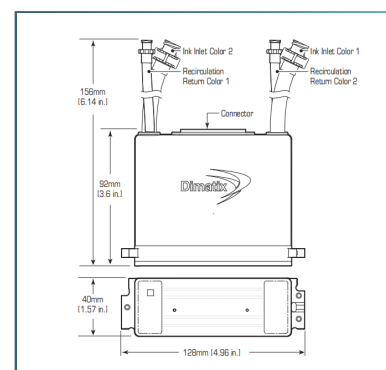

Industrial printheads

The StarFire printheads is equipped with the Dimatix print system, which is developed, built, and supports a complete inkjet printing system based on proprietary printheads technology.

StarFire SG series

Model	Ink droplet size	Frequency
SG1024/MA	30PL	to 35kHz
SG1024/LA	80PL	to 20kHz

The SG series printheads is purpose-built for today's demanding high-speed scanning and single-pass industrial systems designs. It is an easy to integrate, high performance, drop-on-demand printhead. Single color operation can be performed at a resolution of up to 400dpi, or dual color operation can be performed at a resolution of up to 200dpi, with staggered columns up to 400dpi resolution.

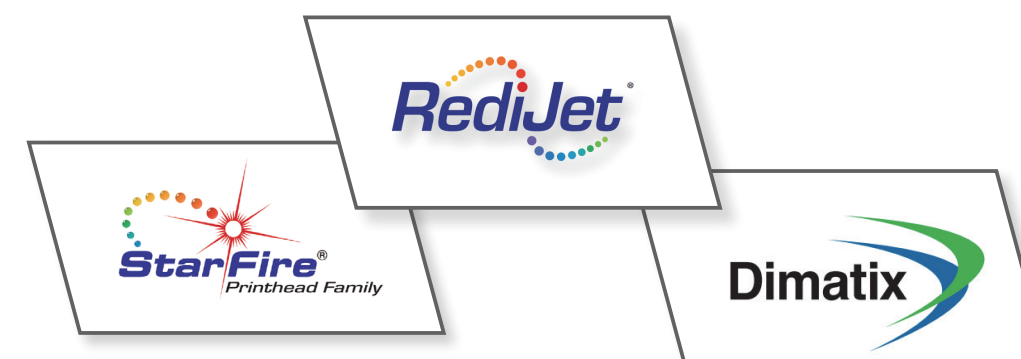

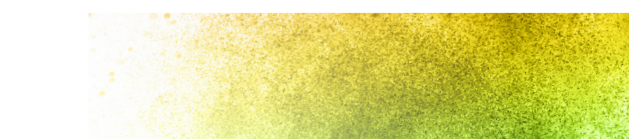

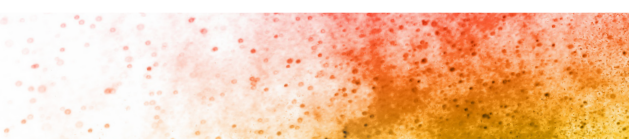

Characteristics of industrial printheads

01. Using materials that have been verified on-site results in a longer lifespan.

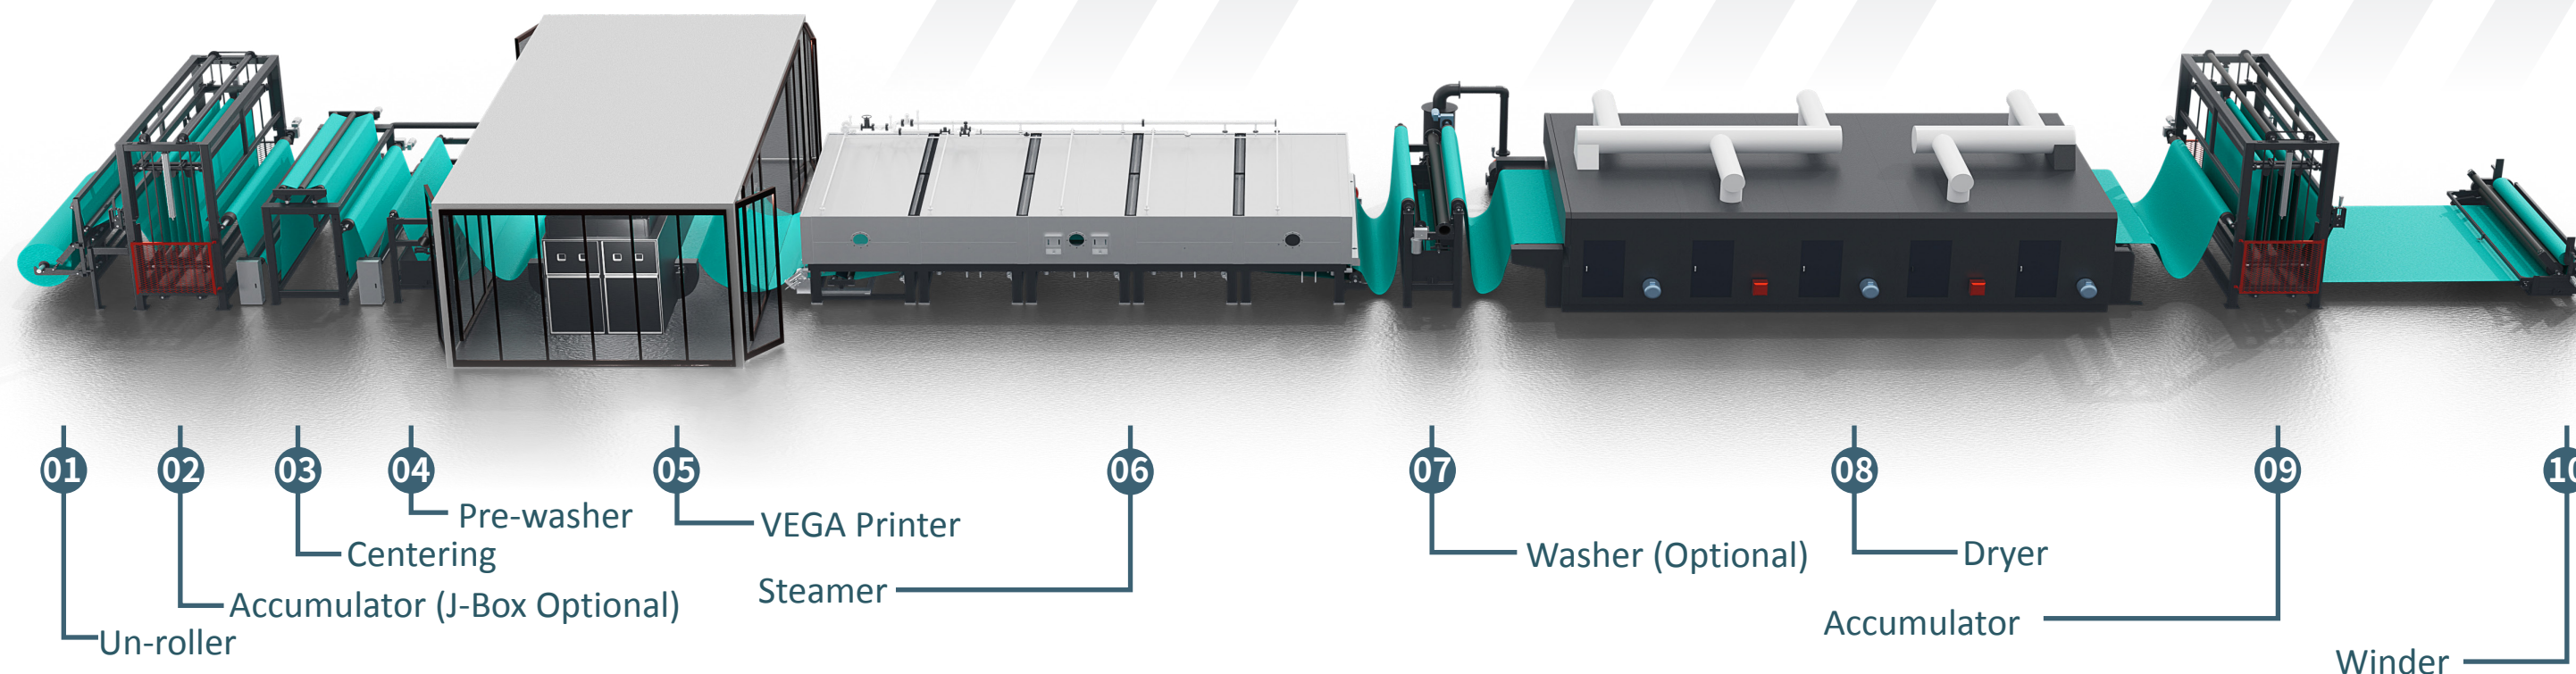

02. Provide ink circulation and 1024 independent channel nozzle arranged on replaceable metal plates for stronger wear resistance.

03. RediJet internal circulation technology continuously circulates ink through the ink chambers inside the nozzle and nozzle panel to extend working time, reduce downtime, and further reduce equipment startup time. Suitable for applications with high concentration ink, easily precipitated ink, and fast drying ink.

04. VersaDrop variable ink drop technology achieves seamless transition printing. The true application of ink droplet size control surpasses general grayscale printing without affecting production efficiency. Repackable nozzle structure significantly reduces customer usage costs.

PRODUCTION Line Introduction

Nylon/Wool/Acrylic/Modified Polyester Carpet

Specification and Technical Data

If you have any other requirements, please contact us

Printing width: 2.2m/3.2m/4.2m	Production speed: 0.5m/min - 7m/min
Printing resolution: 360dpi-1800dpi	Capacity: 120 sqm/hr- 1680 sqm/hr
Color channels: 4 / 6 / 7 / 8	Pile height: up to 20mm
Printheads Qty (per color): 2/4/8/12/16	Pile weight: up to 1400gsm (Tufted), up to 3000gsm (Woven)

Ink

Nylon & Wool: Acid Ink

Acrylic & Modified Polyester: Cationic Ink

Products (Not limited to examples of products)

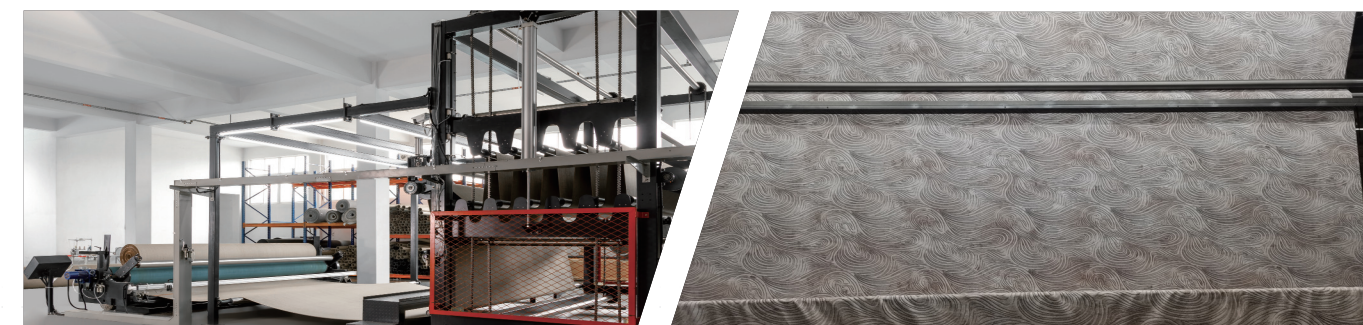

Wall to wall carpets

Rugs

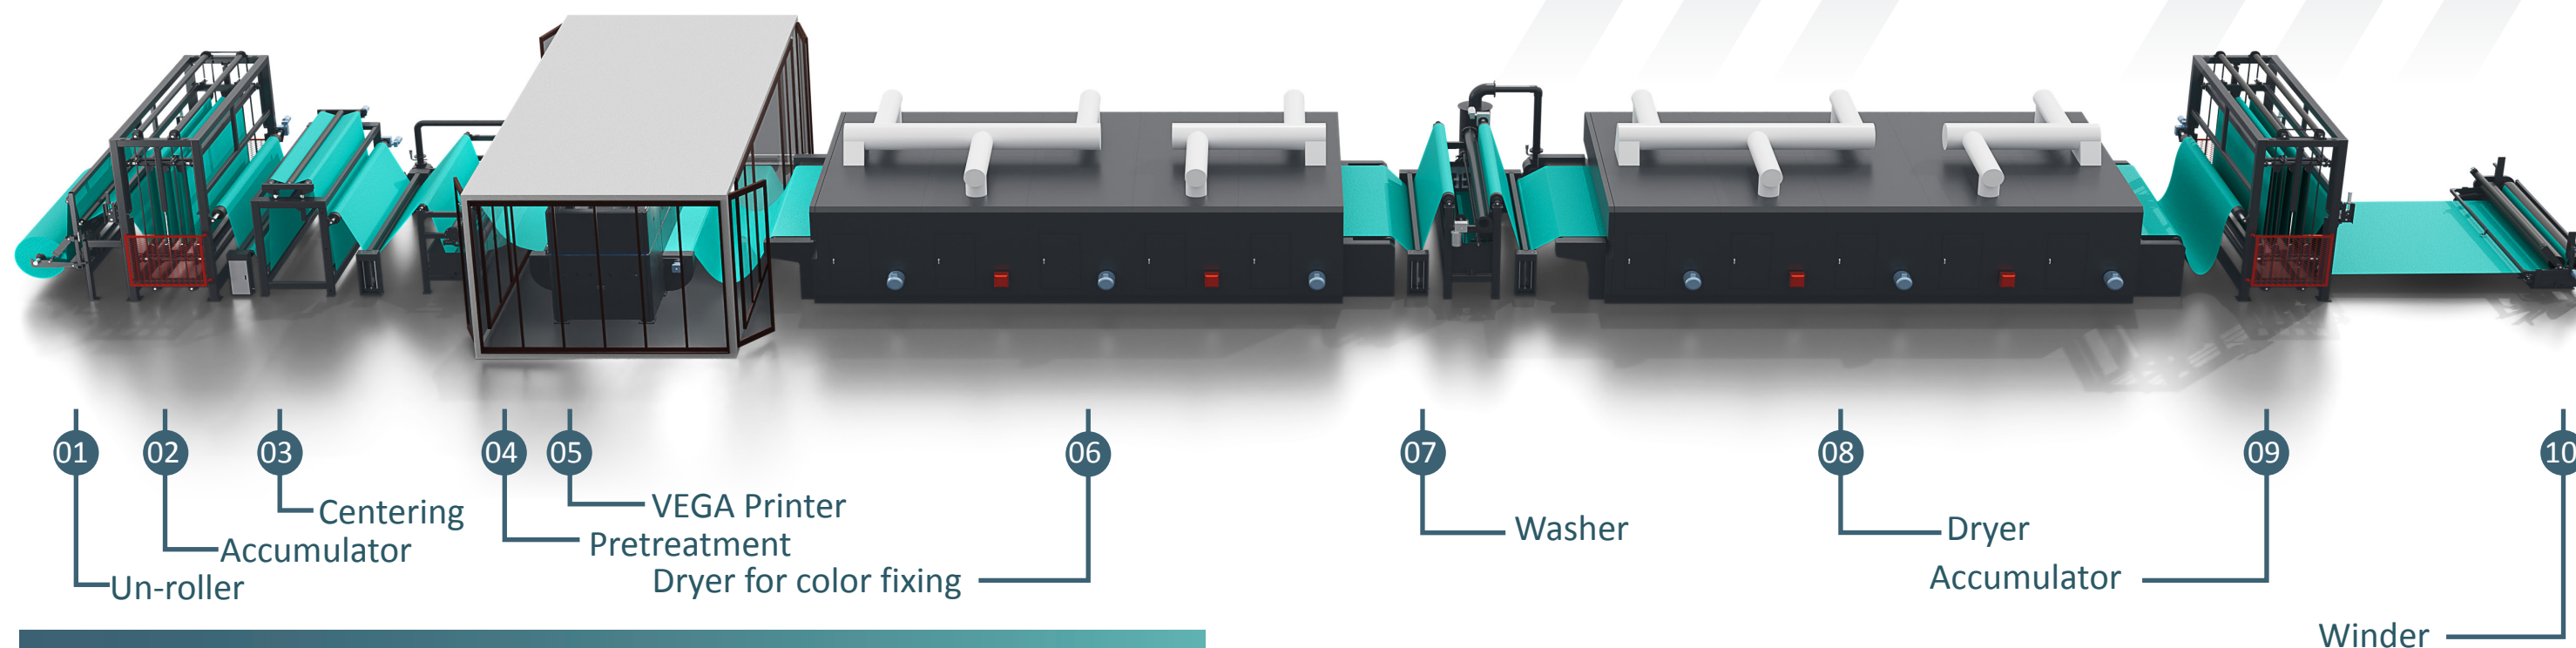

Commercial carpets

Carpet tiles

Mats
